EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Chris Gram on February 25, 2003.
3. The application has been amended as follows:
 - A) Claim 32 has been amended to recited
 - - 32. An array comprising:
 - a polymeric substrate comprising a relaxed oriented film or a relaxed elastomeric material, the substrate having a surface;
 - a mask layer on said surface, the mask layer comprising ink and linking agents wherein the mask layer has a projected surface area and a topographical surface area wherein the topographical surface area is greater than the projected surface area;
 - and at least one reactant affixed to one or more binding sites within the mask layer. - -
 - B) In Claims 33-40, 64: delete "article" and replace therefore, - - array - - .
 - C) Claims 64, 67 have been cancelled.
 - D) Claims 68-70 have been amended to delete "67" and replace the dependencies with - - 32 - - .

REASONS FOR ALLOWANCE

4. The following is an examiner's statement of reasons for allowance.

The claims are drawn to an array comprising a polymeric substrate comprising a relaxed oriented film or a relaxed elastomeric material, the substrate having a surface; a mask layer on said surface comprising ink and linking agents wherein the mask layer has a projected surface area and at least one reactant affixed to one or more binding sites within the mask layer. It is noted that reactant is clearly defined in the specification as any chemical molecule, compound, composition or complex, either naturally occurring or synthesized, that is capable of binding an analyte in a sample of interest either alone or in conjunction with a molecule or compound that assists in bind the analyte to the substrate (page 7, lines 19-29). The specification provides several examples of reactants which include amino acids and nucleic acids.

The art does not teach an array comprising a mask layer which has a projected surface area smaller than the topographical surface area. The art does not teach an array in which the surface contains undulations which increase the surface area.

In view of applicant's amendments to the claims and the filing of a terminal disclaimer, the claims are allowable.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
